

QUALITY ENGINEER

Exlar is a global leader in the design and manufacture of high performance electro-mechanical linear actuators and rotary motors for motion control applications. We are a configure to order, high-growth company. We have an exciting new opportunity for a talented Quality Engineer to join our growing organization.

This individual will be responsible for assuring the highest level of Company product quality through the development, maintenance and continuous improvement of our quality systems. Responsibilities include: 1) Develop new processes and reconfigure existing processes for improved effectiveness and efficiency; 2) Maintain the Company's quality and reliability data utilizing statistical and graphing techniques to analyze and summarize the data; 3) Lead investigations into reported or observed quality problems, report findings and identify and implement corrective actions; 4) Work with suppliers to address quality issues and ensure appropriate corrective action; 5) Work with production personnel and Process Engineers to resolve production quality issues; 6) Develop product quality plans and associated processes relating to new product development and introduction; 7) Perform internal audits of company's quality processes and participate in external audits by registrars and customers; and 8) Participate in the development of product quality plans and related production assembly and test procedures assuring that product quality/reliability goals are met.

The ideal candidate will have a 4-year technical degree with at least 3 years of related experience. Quality auditor certification is preferred. Experience with ISO9001 required; other regulatory experience desired. Formal training and experience with quality system audits and statistical methods is required. Experience with electronic data collection and analysis tools is also necessary.

Exlar provides a great work environment that will enable you to discover your true potential. We are looking for someone that is smart, inventive and passionate about their work, who can meet the challenge of working for a market leader. If you desire the challenge associated with a rapidly growing company and thrive in an environment where individuals are recognized for their personal contribution as well as their team effectiveness, then contact us!
