

The QiG group is looking for a **Quality Systems Engineer** who will use project management tools and skills to organize and manage the implementation of electronic Quality Management Systems. This position will be responsible for the improvement and maintenance of QMS elements.

Additional duties include but are not limited to:

- Optimize PDP process with functional managers and process owners
- Rollout a new electronic QMS and launch to leadership and steering committees
- Update SOPs and create ECOs to align product development procedures
- Conduct clear and concise training events for system changes and routinely train and champion overall QMS/PDP understanding
- Work with and positively influence QMS and PDP users
- Interact frequently with operations QMS peers as well as R&D and process engineers
- Communicate with all levels of management and employees as well as with external customers
- Organize ambiguous environments into process steps

**Qualifications:**

*Education:* Bachelor's degree in Quality, Mechanical, or Computer Engineering or a related field. Master's degree preferred.

*Experience:* 7 - 10 years of related experience including a minimum of 1 year experience in medical devices. Direct experience in commercialization of finished medical devices. Practical background in electronic document/data management systems.

*Specialized Knowledge:* Have an understanding of ISO13485 and FDA QSR/GMP regulations.

*Special Skills:* Ability to self-direct and multitask.
